## 6. File System Time Line

## 6.1 Time stamps: Nomenclature

---

- FAT
  - MAC times
    - M time: Content last Modified
    - A time: Content last Accessed
    - C time: File Created
- NTFS
  - MACE times
    - M time: Content last Modified
    - A time: Content last Accessed
    - C time: File Created
    - E time: MFT Entry last modified
  - MACB times
    - M time: Content last Modified
    - A time: Content last Accessed
    - C time: MFT record last Changed
    - B time: File created (Born)

## 6.2 Last Access Time

---

- Updated in memory, written to disk after  $\approx 1\text{h}$
- As of Win Vista
  - Not updated per default
    - HKEY LOCAL MACHINE/SYSTEM/CurrentControlSet/Control/FileSystem/NtfsDisableLastAccessUpdate

- Performance reasons
- Good for file server
- Still updated some times
  - File new created
  - File copied
  - File moved

## 6.3 Time Line: Exercise

- Foremost
- Scalpel
  - Based on Foremost
- Bulk Extractor
  - Emails, Email addresses
  - URLs
  - Credit card numbers
  - Social media
  - Telephone numbers
  - ...
- Testdisk - Photorec

## 7.3 Limitations

---

- Basically file system independent
- Data sequential
  - Data must be sequential
  - Fragmented data leads to broken files
  - Very large files are more fragmented
  - Depends on file system
  - Depends on media type
  - Data could be overwritten partially
- End of file
  - Does the file format support end marker
  - Do we find a new magic byte
  - Overlapping files
  - Empty space at the end of a sector

## 7.4 Exercise: Recover data from formatted drive

---

- Work on `circl-dfir/carving/formated.dd`
- Try `fls`
- `sudo apt install foremost`
- [https://www.cgsecurity.org/wiki/TestDisk\\_Download](https://www.cgsecurity.org/wiki/TestDisk_Download)

## 7.5 String Search

---

- Not sophisticated
- Search for strings
  - At least 4 characters long
  - From any file: Text, binary, disk image
  - Search for ASCII, Unicode, big/little endian
- Search the disk image for known words
  - Terms used in a secret document
  - IBAN or other banking details
  - Email addresses or URLs
- Search through all the blocks
  - Allocated and non allocated blocks
  - File slack and outside partition boundaries
- Goal
  - Proof that the data was there once
  - Identify interesting data that are close

## 7.6 Steps to do a String Search

---

1. Identify block/cluster size  
`mmls, fsstat`
2. Search for the string and the offset  
`blkls | srch_strings | grep`
3. Calculate block/cluster of the string  
`xxxxxxxxxx / 4096 = yyyy`
4. Review block/cluster content  
`blkcat`
5. Identify inode of the block/cluster  
`ifind`
6. Identify associated file  
`ffind`
7. Recover file  
`icat`  
Or mount and copy file

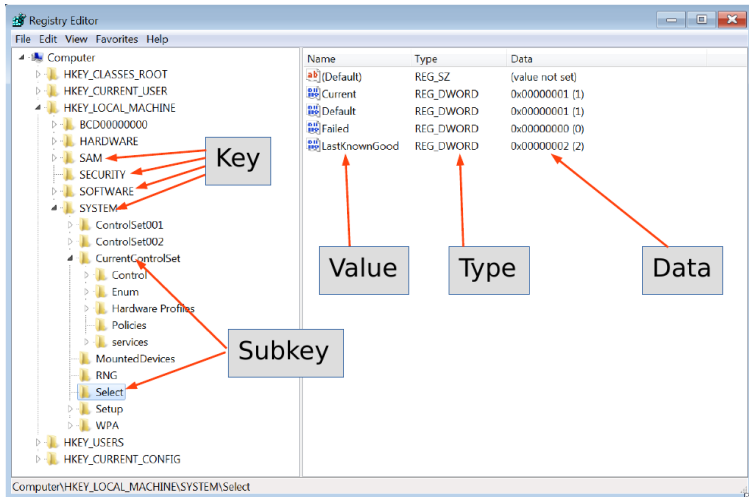

## 8. Windows Registry

## 8.1 About Windows Registry

---

- MS DOS and old Windows
    - On system boot: What programs to load
    - How the system interact with the user
      - `autoexec.bat`
      - `config.sys`
      - `system.ini`
      - `win.ini`
  - <https://support.microsoft.com/en-us/help/256986/>
    - A central hierarchical database
    - Replace text based config files
    - Contains information for operating
      - Hardware system wide
      - OS all aspects
      - Applications installed
      - User preferences / behavior
- A gold mine for forensics

## 8.1 About Windows Registry

## 8.1 About Windows Registry

---

- Hive files location:
  - %SystemRoot%\system32\config  
→ SAM, SECURITY, SYSTEM, SOFTWARE
  - %UserProfile%\NTUSER.DAT
  - %UserProfile%\AppData\Local\Microsoft\Windows\UsrClass.dat

## 8.3 RegRipper

---

- Installation:
  - `sudo apt install regripper`  
or
  - Install wine
  - Clone <https://github.com/keydet89/RegRipper3.0>
  - Use rip.exe with wine

## 8.3 RegRipper

---

```
$ regripper -h
Rip v.3.0 - CLI RegRipper tool
Rip [-r Reg hive file] [-f profile] [-p plugin] [options]
Parse Windows Registry files, using either a single module, or a profile.
```

```

## 8.3 RegRipper - Exercise

---

- `circl-dfir/case_02/registry`
- Use regripper to find:
  - Computer name
  - Software that run when a user logs on
  - Informations on Windows
  - Network cards
  - List of uninstaller
  - Ips
  - List of users
  - Shutdown
  - Timezone

## 8.3 RegRipper - Solution

---

- Computer name:

```

## 9. Windows Event Logs

## 9.1 About Windows Event Logs

---

- Up to Windows XP
  - Mainly 3 .evt files:
    - Security: secevent.evt
    - System: sysevent.evt
    - Application: appevent.evt
  - Location: /Windows/System32/config/
  - Binary Event Log file format
- Beginning with Vista
  - Many .evtx files:
    - Security.evtx
    - System.evtx
    - Application.evtx
    - 120 files ++
  - Location: /Windows/System32/winevt/Logs/
  - New binary XML format

## 9.1 About Windows Event Logs

---

- Advantage
  - Full fledged logging
  - Logging important events: E.g. Logon Success, ...
  - Detailed information
- Disadvantage
  - Limited period of time
  - Important events not logged by default: E.g. Logon Fail
  - Many events, hard to find related information
- Always interesting
  - Logon / Logoff
  - System boot
  - Services started
  - Hardware (dis)connected

# 9.1 Windows Event Logs

The screenshot shows the Windows Event Viewer application. The left pane displays the 'Event Viewer (Local)' tree with 'Security' selected under 'Windows Logs'. The right pane shows a list of security events. Event 4624, 'An account was successfully logged on', is selected. The details pane for Event 4624 is open, showing the following information:

**General**

An account was successfully logged on.

**Subject:**

## 10.4 Prefetch Files

---

- Application prefetching since XP
  - Monitor an application when it starts
  - Collect information about resources needed
  - Wait 10sec after application started → Know where to find the resources → Better performance: App launch faster → Better user experience
- Forensics value:
  - Proof an application was started
    - Secondary artifact
    - Created by the OS
    - Not deleted by the attacker
  - Even if the application don't exists anymore
  - ...
